

### Data Center Colocation at The Planet

- World-class, SAS 70 Type II-audited data centers in Dallas
- Industry-leading network speed and bandwidth capacity
- State-of-the-art Network Operations Center
- High power-density capable
- Remote hands and eyes
- Wide variety of support-on-demand options
- Multiple-layer network security protection
- Monitored physical security and access 24x7

## Data Center Colocation from The Planet

### State-of-the-art “green” design and high power-density capability highlight colocation solution in North Dallas

In 2009, The Planet introduced a new data center facility in North Dallas with 106,000-square-feet available for colocation services. The new facility offers a world-class, SAS 70 Type II-audited colocation environment with unmatched network speed and bandwidth capacity, local and remote Network Operations Centers, expert support services and high power density.

Utilizing the latest modular cooling technology from Turbine Air Systems (TAS), the mixed-use data center features N+1 cooling and power architectures, with state-of-the-art, high-efficiency, water-cooled chillers. The data center’s “green” architectural design features an equipment galley located outside of the data center floor, housing six large air-handling units and all chilled-water piping. Because all water is located outside of the actual data center floor, the design eliminates the possibility of an interior water leak.

Outside and adjacent to the new data center, The Planet’s state-of-the-art, high-efficiency N+1 cooling and power architecture is backed by five on-site, diesel-powered generators with a minimum three-day fuel supply, along with two 30,000-gallon water-storage tanks for the facility’s chillers.

All this assures you continuous uptime operation of power and water systems, independent of potential brownouts, outages or water-supply interruptions. Based on its unique design, The Planet data center expects to achieve a 1.3 “coefficient of efficiency” ranking, which is significantly below the 1.6 “ideal” rating. Recognized by the Environmental Protection Agency (EPA) and the Uptime Institute, this score demonstrates The Planet’s total commitment to value and reliability in an ultra-efficient colocation solution.

### World-Class Colocation Offerings

As the world’s largest, privately held provider of dedicated server IT hosting, The Planet provides a broad range of colocation options, from dedicated locking cabinets to private cage rentals. Our colocation configurations and service options at The Planet provide you with the optimum solution, along with flexibility to expand and scale as needed.

#### Locking Cabinets

The Planet offers colocation cabinets in a highly secure storage environment, while ensuring your collocated equipment receives proper cooling and power. With a number of available options, The Planet colocation cabinet is the ideal solution for small and growing server installations.

#### Private Cages

The Planet offers private cages built to your exact specifications. We offer maximum flexibility and a proper, secure environment for customers who require multiple cabinets and guaranteed floor space for future expansion.

## High-Speed Network Options

The Planet provides ultra-high-speed network connections through either direct network feeds or blended feeds, enabling you to bypass the local loop and tie in directly to the Internet.

## Redundant Power

The Planet offers redundant circuits as optional services in all of its colocation facilities. Redundant circuits provide you with a second circuit path that can mitigate the potential for power outages within your cabinet or cage area.

## 24x7 Access and Security

The Planet assures 24x7 online and in-person access, along with a wide range of self-service tools for reboots, monitoring, bandwidth graphs and more, all backed by state-of-the-art on-site and online security. Supported by industry-leading Service Level Agreements (SLAs) that encompass both colocation and IP connectivity, you get a high-quality, competitively priced colocation solution to fit your exact needs.

## Flexible On-Site Services and Expertise

The Planet's experienced, certified hosting experts are always standing by and ready to address your administration needs with remote hands and eyes, as well as more advanced services. At The Planet, you only pay for the help you need, and the choice is yours. Call on us only when you need us, and we'll be there for you.

### Remote Hands and Eyes

Remote hands and eyes services are provided to every colocation customer, with 24x7 data center expertise and assistance on demand. Our certified colocation engineers can access equipment immediately, minimizing your costs for technician visits, and rapidly addressing hands-on needs in an emergency when speed is critical. You also have the option to purchase specific routine support and maintenance tasks if desired.

### Alpha Advanced Services™

While remote hands and eyes assure basic on-site, first-line maintenance and support, The Planet gives you the flexibility to add special advanced services as needed. Our colocation Alpha Advanced Services™ monitoring, security and administration modules can conveniently supplement the administration and maintenance of your collocated equipment. These services let you create the optimal management plan for your business, which lowers your operational costs and improves the security and availability of your collocated environment.

### Professional Services

The Planet offers an experienced staff of certified engineers available to help you with any specific project or tasks you may need in trouble shooting or managing issues in your collocated IT infrastructure. Services can be billed on an hourly basis or through a service contract customized to your specific requirements.
